Update base samdb by searching difference with reference one
Starting update of samdb
There are 1 missing objects
Object CN=dns-dc,CN=Users,DC=paulis-home,DC=local will be added
Not applying delta to @ATTRIBUTES because there is not only add
Reloading a merged schema, which might trigger reindexing so please be patient
Schema reloaded!
Exception during upgrade of samdb:
Traceback (most recent call last):
  File "./source4/scripting/bin/upgradeprovision", line 1101, in update_partition
    provisionUSNs, names.invocation)
  File "./source4/scripting/bin/upgradeprovision", line 910, in update_present
    if get_diff_sddl(refsddl, cursddl) == "":
  File "bin/python/samba/upgradehelpers.py", line 378, in get_diff_sddl
    if hash_new["owner"] != hash_ref["owner"]:
KeyError: 'owner'
Update failed
Rolling back all changes. Check the cause of the problem
Your system is as it was before the upgrade
dpauli@dc:~/src/samba$
